Upgrading the ReVeal MPX software

Once you have obtained the compressed software file. Extract the compressed file to the local drive of the PC, where the ReVeal MPX will be installed. Install the software only after extracting the files to avoid running into error (error code 2689).

It is recommended to manually uninstall the existing version from the Control Panel if the privilege setting used in the previous installation is not known. Otherwise, the installer package will not completely clean up the previous version. This will result the Help > About ReVeal MPX Lite still shows the old version after the upgrade. The old and the new versions will also be listed in the Control Panel program list.

On PC running Windows 7, right click the Setup.exe file and select Run as administrator to start the software installation process for non-Administrator login.
