References

Upgrading the ReVeal RXT6000 software

Once you have obtained the compressed software file, extract the compressed file to the local drive of the PC, where ReVeal will be installed. Install the software only after extracting the files to avoid running into error (error code 2689).

It is recommended to manually uninstall any previous version using the Control Panel, if the privilege setting used in the previous installation is not known. Otherwise, the installer package will not completely clean up the previous version. This will result the Help > About ReVeal still shows the old version after the upgrade and the old and the new versions will also be listed in the Control Panel program list.

On a PC running Windows 7 or 8.1, right click the Setup.exe file and select Run as Administrator to start the software installation process.
